

Visual Presentation

You will create a visual presentation (ex. PowerPoint) to accompany your first news report on the demographic situation in the country you have chosen. The visual presentation should present the main points of the news report, help the audience understand the demographic situation and both capture and hold their attention.

Elements to include:

- Two maps (a map of the country or region and a map that indicates where the country is located in the world)
- A table or graph that compares at least one demographic characteristic – the comparison can be with other countries or over a period of time in the same country
- At least 5 images
- The highlights of the presentation (not a written summary of the entire presentation)
- A bibliography
